Name of the Activity: Workshop on Micrometry

Organizing Department: Zoology

Date: 19/02/2022

Course Detail: This course was for B. Sc. Ist year Zoology students.

The aim of the course is to measure the size of microorganism with microscope.

After the course completion the student learned

- Micrometry (micro: microscopic, metry: measurement) is the measurement of the dimensions of microscopic objects in terms of length, breadth, diameter and thickness.
- Using the required objective, the graduations on the ocular micrometer are calibrated against the standard graduations on the stage micrometer. Calibration is required, because the distance between ocular graduations varies depending on the objective being used, which determines the size of the field.
